

Technology In The Secondary Science Classroom

If you're waiting to be convinced that computers offer more than pricey bells and whistles in the classroom, this is the book that will open your mind to technology's potential. But even if you're an early (and avid) adopter, you'll discover intriguing new concepts for technology-based teaching strategies that help students really learn science concepts. The featured technologies range from the easy to master (such as digital cameras) to the more complex (such as Proeware and geographic information systems). Among the chapter topics: Digital images and video for teaching science Using computer simulations Proeware tools for science investigations Extending inquiry with geo-technologies Acquiring online data for scientific analysis Web-based inquiry projects Online assessments and hearing students think about science The book's emphasis is never on technology for technology's sake. Each chapter includes a summary of current research on the technology's effectiveness in the classroom; best-practice guidelines drawn from the research and practitioner literature; and innovative ideas for teaching with the particular technology. The goal is to stimulate your thinking about using these tools and deepen your students' engagement in science content.

Use of Instructional Technologies in Science Classrooms - tojet Technology in the Science Classroom Keywords: Instructional technologies, Science teachers, Information and .. teaching and learning in a technology-enhanced secondary science classroom. **Collaborative Inquiry with Technology in Secondary Science** Technology integration in the science classroom can be approached in several different ways. In this lesson, we'll look at technology integration **Technology in the Secondary Science Classroom - Google Books Result** Technology in the secondary science classroom / edited by Randy L.
