

# Brunelleschi, Lacan, Le Corbusier: Architecture, Space and the Construction of Subjectivity

This well-argued, analytic text provides a greater understanding of spatial issues in the field of architecture. Re-interpreting the fifteenth century demonstration of perspective, Lorens Holm puts it in relation to today's theories of subjectivity and elaborates for the first time the theoretical link between architecture and psychoanalysis. Divided into three sections, Brunelleschi, Lacan, Le Corbusier argues that perspective remains the primary and most satisfying way of representing form, because it is the paradigmatic form of spatial consciousness. Well-illustrated with over 100 images, this compelling book is a valuable study of this key aspect of architectural study and practice, making it an essential read for architects in their first year or their fiftieth.
