

Calculus With Analytic Geometry

Appropriate for standard undergraduate Calculus courses. The mainstream calculus text with the most flexible approach to new ideas and calculator/computer technology. *NEW - There are more than 1250 new problems among the books total of approximately 6700. Almost all of these are in the intermediate range of difficulty, neither highly theoretical nor computationally routine. Some reflect an emphasis on new technology by encouraging the use of technology ranging from a graphing calculator to a computer algebra system. *NEW - Web site available to users with student help center staffed by graduate students available on Sunday evenings. Site includes animations of most text examples with what-if scenarios, challenging applications that require the user to have some type of number crunching software, self-paced quizzes, and internet links of additional calculus material. *NEW - More than 20% of the 700 in-text examples are new as are about twenty of the 50 optional technology projects. *NEW - Includes new matrix terminology and notation in the multivariable portion of the text. *NEW - Reorganization by combining vectors in 2-space and 3-space, yielding one less chapter than previous edition. *NEW - All of the technology projects are on the web site with a menu of Maple, Mathematica, Derive, MATLAB, and EXCEL that appropriately (with a click or two) ties into the users machine. Sntax is provided for use of the projects with a TI graphing calculator as well. *All the technology projects are on the web site with a menu of Maple, Mathematica, Derive, MATLAB and EXCEL that appropriately (with a click or two) ties into the users machine. Sntax is provided for use of the projects with a TI graphing calculator as well. *Provides a solid combination of standard calculus and a fresh conceptual emphasis that is open to the possibilities offered by new

technologies. *The most extensively visual text in the market, highlighted by hundreds of Mathematica and MATLAB generated figures throughout the book.
