

Inflammation and Cardiac Diseases (Progress in Inflammation Research)

Heart failure research is a most active area of research in academic, industrial and government-sponsored research and receives intense clinical attention. The recent recognition that inflammation is a risk factor and prognostic factor for heart disease has laid ground for preventive medicine and even anti-infective strategies in prevention and treatment of heart failure. Provides a new perspective on the etiology of cardiac failure Covers the latest developments Discusses future treatments for heart failure Ideal for researchers and clinicians
