

Lab Safety Training Made Simple

Make mandatory safety training fun and memorable well show you how! Laboratory directors face increasing pressure from OSHA, the Joint Commission, COLA, and CAP to train frontline staff on safety compliance every year. Safety compliance training not only fulfills annual regulatory requirements, but also helps to maintain a safe work environment, protect your facility's bottom line, and avoid fines or fees from major regulators. But, on top of everything you already do on the job, we know there's little time left to design a training program that's both creative and educational. That's where The Safety Lady™ comes in! HCPRO is proud to introduce Lab Safety Training Made Simple a comprehensive training program delivered in an easy-to-use book and CD-ROM set. Written by The Safety Lady™ Terry Jo Gile, this resource is just as the name implies it will help you make obligatory safety training simple and easy to do, as well as fun and interesting, so your staff won't fall asleep! Packed with tips, tools, games, activities, and case studies, Lab Safety Training Made Simple features training methods culled from lab experts in the field. It provides guidance on how to design successful training for employees of various ages, learning styles, levels of education, and job experience. Five reasons you need Lab Safety Training Made Simple! Whether you're a lab manager or director; safety, training, or compliance officer; or even hospital safety director, Lab Safety Training Made Simple will help ensure that your employees stay engaged, while being educated on key safety procedures. - 19 lab activities and games Written specifically for laboratory employees, these activities are sure to keep things interesting for everyone! - Expert how to advice Terry Jo Gile draws on years of experience, and shares her expert advice on how to decide which method of training may work best for different topics or

situations, and when to deliver training using internal staff or outside resources. - A special section devoted to training new employees Make sure newcomers learn their lab standard operating procedures right away, know where emergency equipment is located, and understand what to do if a spill or other accident occurs. Since safety must be a full-time concern, this section will also offer guidance on regular updates and refresher training for all staff. - Tips, tools, and case studies Each lab safety topic covered in the book includes at least one relevant case study, as well as several Safety Savvy Tip boxes that provide important points to emphasize during training. Plus, each topic comes with a competency assessment suggestion and an evaluation tool to gauge how well your staff is doing! - Critical compliance information All of the safety topics are directly correlated with the safety section of the CAP Laboratory General Checklist, and include additional references where appropriate. If you already have a training program youre comfortable with, you dont have to change your presentation just add one or two ideas from Lab Safety Training Made Simple to what you already do well. However, if safety training is just too overwhelming, follow the easy talking points and activities, use the case studies provided, or create your own, and soon you will be presenting with pizzazz! Whatever your lab safety training needs are, this book and CD-ROM are guaranteed to add some fun and creativity to the process. Order your copy of Lab Safety Training Made Simple today!
