Excerpt from Conversion Tables for Various Viscosimeters: Using the Saybolt Universal Viscosimeter as the Standard; A Thesis

The cry of the present age of the engineer is for standardization. Perhaps the one field of activities which has been neglected is the testing of lubricants. In the past, various types of viscosimeters have been used for testing the viscosity of oils, which has created a great deal of confusion. At present time the tendency of the larger oil manufacturers is to use a standard type of viscosimeter. It is therefore the aim of the writers to study the various viscosimeters at their command and to construct tables and curves whereby the viscosity of any meter can be readily transferred into the corresponding value on the Saybolt Universal Viscosimeter. We wish to express our thanks to Prof. James Clinton Peebles for his cooperation and suggestions. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
