

Reversibility of Chronic Disease and Hypersensitivity, Volume 2: The Effects of Environmental Pollutants on the Organ System

Encyclopedic in scope, *Reversibility of Chronic Degenerative Disease and Hypersensitivity, Volume 2: The Effects of Environmental Pollutants on the Organ System* draws deeply from clinical histories of thousands of patients. It focuses on clinical syndromes within the musculoskeletal, gastrointestinal, and respiratory systems. The book explores mechanisms of chemical sensitivity and chronic degenerative disease as well as the triggering agents of musculoskeletal, gastrointestinal, and sino-respiratory diseases. It then discusses triggering agents such as natural gas, pesticides, solvents, and micotoxins. The authors include new data for indoor and outdoor air pollution that harms the chemically sensitive and chronic degenerative diseased patient as well as new data for breath analysis. They also describe the physiology of chemical sensitivity and chronic degenerative diseases, their manifestations, diagnosis, and approaches to reverse dysfunction. The second volume of a five-volume set, the book provides an essential resource for health care providers diagnosing and treating chemical sensitivity and chronic degenerative disease.
